Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/706,377

Applicant(s)

BOZAK ET AL.

Examiner

Soumya (Ronnie) Dasgupta

Art Unit

2176

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 2 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 5/28/2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-7 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-7 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- ☐ Notice of Informal Patent Application
- ☐ Other: _____

Art Unit: 2176

DETAILED ACTION

This is the final rejection based on 10/706,977 amendment filed on 5/8/2007. Claims 1-7 are amended. Claims 1-7 are rejected.

Response to Arguments

1. Applicant's arguments filed 6/14/2007 have been fully considered but they are not persuasive.

Rejection of Claims 4 and 6 under 35 U.S.C. ~ 102(e)

On pg. 7, lines 14-18, the applicants state: "However, even assuming that Fig. 19 of Vaid teaches a grid manager, Fig. 19 does not disclose any hierarchical relationship. For example, the computers listed in column 1901 are not hierarchically arranged. That is, none of the computers in column 1901 is superior or inferior to another computer."

- The examiner disagrees. Vaid teaches that "by selecting one of the tabs, the present tool sorts data or information in ascending order by clicking on any header (e.g., Kb Transferred), as illustrated by FIG. 9 for a service tab 900" (col 18, lines 1-14).
 - The examiner notes that the term "hierarchical" is functionally equivalent to "sorts data... in ascending order."

Claims 4 and 6 remain rejected under 35 USC ~ 102(e)

Rejection of Claims 1-3 under 35 U.S.C. § 103(a)

Art Unit: 2176

On pg 8, lines 7-16, the applicants state: " In the Office Action, the Examiner alleges col. 40, lines 55-67 of Muller teaches that **"the rows [are] structured hierarchically with respect to... concrete service instances,"** as recited in claim 1. See Office Action, p. 5. The Examiner's allegation is incorrect. Although the cited portion of Muller mentions a "hierarchical view" (col. 40, line 58), the items in that view are "computer nodes 200, IONs [(input/output nodes)] 212, and fabrics 106" (col. 40, lines 58-59). Conversely, claim 1 recites **"each of the rows representing services"** (emphasis added). Furthermore, the cited portion of Muller does not teach or suggest that items in Muller's hierarchical view are "structured hierarchically with respect to... service instances" (emphasis added), as recited in claim 1."

- The examiner disagrees. The applicants state in the 10/706377 application that "the invention features a method including receiving a request to view a sub grid network of a grid network, the sub grid network representing a root node and nodes with inferior relations to the root node, the nodes representing grid managers managing one or more services running on computers in the grid network" (pg 1, paragraph 10). It is obvious to one of ordinary skill in the art would correlate service managers or services with computer nodes with a hierarchical view because both services and nodes are representative for networks and the nodes represent grid managers managing one or more services.

Art Unit: 2176

- It is obvious to one of ordinary skill in the art to correlate hierarchical views with hierarchical structure because a hierarchical "view" is displaying a hierarchical "structure."

On pg 8, line 17- pg 19, line 6, the applicants state: "Moreover, Vaid does not compensate for the deficiencies of Muller. The Examiner admits that "Muller fails to teach..., **hierarchical structure with respect to an application where a service belong, a type of service and concrete service instances.**" See Office Action, pp. 5-6. However, Applicants submit that Vaid fails to cure the deficiencies of Muller described above at least because Vaid does not disclose or suggest a hierarchical structure for at least the reasons set forth above with respect to the § 102(e) rejection of claim 4 and 6. Therefore, Muller and Vaid, taken alone or in any reasonable combination, fail to teach or suggest each and every element of claim 1, and required by dependent claims 2 and 3." Thus, a *prima facie* case of obviousness has not been established with respect to claims 1-3.

- The examiner disagrees. Vaid teaches that "by selecting one of the tabs, the present tool sorts data or information in ascending order by clicking on any header (e.g., Kb Transferred), as illustrated by FIG. 9 for a service tab 900" (col 18, lines 1-14).
 - The examiner notes that the term "hierarchical" is functionally equivalent to "sorts data... in ascending order."

Claim 1-3 remains rejected under USC 103(a) because *prima facie* case of obviousness has been established.

Rejection of Claim 5 under 35 U.S.C.~ 103(a)

On pg. 9, lines 13-23, the applicants state: "The Examiner contends that Excel **"teaches that a shrinkable structure that hides the labels representing grid managers or other application service in the matrix-like structure for the purpose of hiding labels for columns and rows."** See Office Action, p. 7. Although Applicants disagree, even assuming that the Examiner's characterization of Excel is correct, Excel fails to cure the deficiencies of Vaid discussed above. That is, Excel fails to teach or suggest **"one or more grid managers hierarchically inferior to the first grid manager,"** as recited in claim 4, and required by claim 5. For at least these reasons, Vaid and Excel, taken alone or in any reasonable combination, fail to teach or suggest each and every element of claim 5."

- The examiner disagrees. Vaid teaches that "by selecting one of the tabs, the present tool sorts data or information in ascending order by clicking on any header (e.g., Kb Transferred), as illustrated by FIG. 9 for a service tab 900" (col 18, lines 1-14). The examiner notes that the term "hierarchical" is functionally equivalent to "sorts data... in ascending order."
 - It would be obvious to one of ordinary skill in the art to sort descending order as well ascending order. The examiner interprets hierarchically inferior to be functionally equivalent to sorting in descending order.

Claim 5 remains rejected under USC 103(a) because the prior art(s) used teaches every element of claim 5.

Art Unit: 2176

Rejection of Claim 7 under 35 U.S.C. ~ 103(a)

On pg 10, line 12 – lines 21 pg 11, line 6, the applicants state: None of the cited portions of Muller teach or suggest the claimed "inferior grid manager" or "current status."

Although col. 39, lines 49-64 of Muller discloses computer nodes and applications, neither the computer nodes nor the applications can constitute a teaching or a suggestion of the claimed "grid manager." Muller is also silent with respect to any teaching or suggestion of a hierarchy. Therefore, Muller does not disclose or suggest the claimed "inferior grid manager." Furthermore, although col. 3, lines 34-42 of Muller does mention various types of communications (for example, transmitting a globally unique ID and authenticating the source using a signature), there is no teaching or suggestion of any **"querying... for a current status,"** as recited in claim 7.

- The examiner disagrees. The applicants state in the 10/706377 application that "the invention features a method including receiving a request to view a sub grid network of a grid network, the sub grid network representing a root node and nodes with inferior relations to the root node, the nodes representing grid managers managing one or more services running on computers in the grid network" (pg 1, paragraph 10).
 - It is obvious to one of ordinary skill in the art would correlate grid managers and nodes.
 - The examiner notes that a "hierarchical view" is cited by Muller (col 40, line 58). It is would be obvious to one of ordinary skill in the art to

Art Unit: 2176

determine if hierarchical view can be deemed as having elements in the "view" having superior or inferior relation to one another.

- Muller states, "When the SES Event Monitor 702 starts, it reads in the status for each element 402-424 contained in the enclosure. This status is the Current Status. When a status change is detected, each status that changed from the Current Status is reported back to the Management Service Layer 706. This new status is now the Current Status. For example, if the current status for a fan element is OK and a status change now reports the element as Fan Fail, an event will be reported that specifies a fan failure. If another status change now specifies that the element is Not Installed, another event will be reported that specifies the fan has been removed from the enclosure. If another status change specifies that the fan element is OK, another event will be generated that specifies that a fan has been hot-plugged and is working properly" (col 15, lines 37-50).

- The examiner notes that querying occurs When the SES Event Monitor 702 starts, it reads in the status for each element 402-424 contained in the enclosure.

On pg 11, lines 1-6, the applicants state: "Although Applicants disagree, even assuming that the Examiner's characterization of Vaid is correct, Vaid fails to cure the deficiencies of Muller discussed above. That is, Vaid fails to teach or suggest "**querying hierarchically inferior grid managers for current status**," as recited in claim 7. For at

Art Unit: 2176

least these reasons, Muller and Vaid, taken alone or in any reasonable combination, fail to teach or suggest each and every element of claim 7.”

- The examiner disagrees. Vaid teaches that “by selecting one of the tabs, the present tool sorts data or information in ascending order by clicking on any header (e.g., Kb Transferred), as illustrated by FIG. 9 for a service tab 900” (col 18, lines 1-14). The examiner notes that the term “hierarchical” is functionally equivalent to “sorts data... in ascending order.”
 - It would be obvious to one of ordinary skill in the art to sort descending order as well ascending order. The examiner interprets hierarchically inferior to be functionally equivalent to sorting in descending order.
- Vaid also teaches **querying... for current status** (col 11, lines 1-12). “The tool provides second to second time scale monitoring and control of incoming and outgoing traffic over the network. As merely an example, the tool ensures that critical or more important traffic gets a right of way during traffic bursts and provides bandwidth enforcement. Multiple users of the network at a specific time can cause the traffic burst. Alternatively, multiple sessions on the network at a specific time can cause the traffic burst. Once the traffic burst is detected, the tool has a control device, which provides bandwidth enforcement to ensure that the more important traffic gets through the network.”
 - It is would be obvious to one of ordinary skill in the art to compare “detection” as functionally equivalent to “querying.”

Art Unit: 2176

Claim 7 remains rejected under USC 103(a) because it teaches every element of claim 7.

Provisional Non-Statutory Obviousness-Type Double Patenting Rejection

The examiner disagrees with the applicant's argument and Provisional Non-Statutory Obviousness-Type Double Patenting Rejection for claims 1 and 3 remains. The applicant is incorrect when stating that a *provisional non-statutory double patent* rejection depends on an existing patent. The *provisional non-statutory double patent* rejection depends on current applications, whereas a *non-provisional double patent* rejection depends on an existing patent. Also, the applicant failed to submit a terminal disclosure to overcome the *provisional non-statutory double patent* rejection.

Conclusion

2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

SD

Art Unit: 2176

The following is the original non-final rejection of application (10/706,377):

DETAILED ACTION

This is a response to the following case application:

Non-provisional Application No 10/706,377 filed on November 12, 2003.

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claim 1-6 are rejected under 35 U.S.C. 101 because the claimed invention is not directed to one of the four statutory categories of invention and are thus non-statutory. Furthermore, claims 1-6 has judicial exception (abstract), but it fails to provide a practical application and thus does not produce a tangible result. Furthermore, in claims 1-6, the GUI is a non-functional descriptive matter and is thus non-statutory.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2176

Regarding claim 4, the phrase "or the like" renders the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "or the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d). The term "matrix-like structure" is an indefinite term.

5. Claim 4, 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention because claims 4, 7, the phrase "inferior relation" renders the claims vague and indefinite because such a determination is subjective and thus unclear.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 4 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Vaid et al (US 6,502,131).

With respect to claim 4, Vaid teaches that FIG. 19 illustrates a graphical user interface (GUI) that is a matrix-like structure with columns and rows (examiner notes that the GUI presented has columns and rows), each column representing a computer

Art Unit: 2176

from a set of computers in the computer grid (row number 1091 has a column of computers), each computer from the set of computers having a grid manager (a grid manager can be inferred into the system), and each row representing a grid manager or other application service (row number 1907 can be represented as a row with a service), positions of labels in the structure indicating which computer currently runs which grid manager or other application service (GUI includes labels); a column representing a first computer from the set of computers running a first grid manager (row number 1901 represents a computer which can be inferred to be from a set of computer running a grid manager or service); and one or more columns representing one or more computers from the set of computers running one or more grid managers having an inferior relation with the first grid manager (the term "inferior relations" is subject and thus unclear); and with respect to claim 6 Vaid teaches that in FIG. 19 illustrates a graphical user interface (GUI) that the rows representing application services are structured by application class.

With respect to claim 6, Vaid teaches that FIG. 19 illustrates a graphical user interface (GUI) where the rows representing application services are structured by application class (see rows labeled Rule ~1901, Sender~1903, Receiver~1905, etc).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2176

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

10. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

11. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Muller et al (US 6,256,740) in view of Vaid et al (US 6,502,131).

Muller teaches displaying a list structure with columns and rows and using (column 21, line 55 - col 22, line 34, Table VIII); the rows structured hierarchically according to its service instantiation (col 40, lines 55-67).

Art Unit: 2176

Muller fails to teach rows and columns representing services in a grid computing network, and hierarchical structure with respect to an application where a service belong, a type of service and concrete service instances and the columns represent grid nodes in a graphical user interface.

Vaid teaches displaying a list structure with columns and rows and using a graphical user interface (Fig. 19).

Vaid teaches rows and columns representing services in a grid computing network, and hierarchical structure with respect to an application where a service belong, a type of service and concrete service instances and the columns represent grid nodes for the purpose of teaching a hierarchical grid network (Fig. 19).

It would have been obvious to one having ordinary skill in the art at the time of the Applicant's invention to have modified the invention of Muller with the rows and columns representing services in a grid computing network and the hierarchical structure therein with respect to an application where a service belongs, a type of service and a concrete service instances as taught by Vaid because it allows the user to make a grid network computation with service hierarchy in graphical user interface form.

Muller and Vaid are analogous because a service or application hierarchical structure.

12. Claim 5 rejected under 35 U.S.C. 103(a) as being unpatentable over Vaid et al (US 256,740) in view of Microsoft Excel 2000.

Vaid teaches the invention of claim 4 as discussed above.

Art Unit: 2176

Vaid fails to teach a shrinkable structure that hides the labels representing grid managers or other application services in the matrix-like structure.

Microsoft Excel 2000 teaches that a shrinkable structure that hides the labels representing grid managers or other application services in the matrix-like structure for the purpose of hiding labels for columns and rows (pg. 67-68).

It would have been obvious to one having ordinary skill in the art to modify Vaid with adjustable rows, columns, or headers to hide labels for a shrinkable structure as taught by Microsoft Excel 2000 because it allows the user to hide labels by shrinking them thereby simplifying the display.

Vaid and Microsoft Excel 2000 are analogous because they both teach GUIs representing columns and rows.

13. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Muller (6,256,740) in view of Vaid et al (US 256,740).

With respect to claim 7, Muller teaches viewing a sub grid network of a grid network, the sub grid network representing a root node and nodes with inferior relations to the root node, the nodes representing grid managers managing one or more services running on computers in the grid network name (column 17, lines 21-37); querying a grid manager representing the root node for its status and addresses of nodes with inferior relations (the examiner notes that the querying between two nodes anticipates receiving a request); querying inferior grid managers for current status (column 3, lines 34-42, column 39, lines 49-64).

Art Unit: 2176

Muller fails to teach a displaying state of the root and inferior grid managers and for each grid manager, a computer system running the grid manager.

Vaid teaches that in FIG. 19 illustrates a state of the root and inferior grid managers and for each grid manager, a computer system running the grid manager.

It would have been obvious to one having ordinary skill in the art to modify Muller to display a state of the root and inferior grid managers and for each grid manager, a computer system running the grid manager as taught by Vaid because it allows the user to display the current function and relations of grid managers and nodes.

Muller and Vaid are analogous because they both teach the grid management systems.

Double Patenting

14. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

This is a provisional obviousness-type double patenting rejection.

Art Unit: 2176

15. Claim 1 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1,3 of copending Application No. 10/712,886.

Claims 1 and 3 of application 10/712,886 (from hereon referred to as 712) teaches a graphical user interface (GUI) comprising: a structure with columns and rows, each of the rows representing services in a grid computing network, (Claim 1 of 712 states that the graphical user interface (GUI) comprising: a graph with edges and vertices, the vertices representing grid nodes and the edges representing an association of two grid nodes in a grid computing network), the rows structured hierarchically with respect to an application where a service belongs, a type of service and concrete service instances (Claim 3 of 712 states that the association is hierarchical).

Claims 1 and 3 of 712 fail to teach columns and rows.

Vaid teaches columns and rows representing services in a grid computing network, and hierarchical structure with respect to an application where a service belong, a type of service and concrete service instances and the columns represent grid nodes for the purpose of teaching a hierarchical grid network (Fig. 19).

It would have been obvious to one having ordinary skill in the art to modify 712 to graphical user interface (GUI) comprising: a structure with columns and rows (in place of the edges and vertices), each of the rows representing services in a grid computing network, the rows structured hierarchically with respect to an application where a

Art Unit: 2176

service belongs, a type of service and concrete service instances as taught by Vaid because the two types of structures are well known equivalents.

16. Claims 4 and 5 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 4 of copending Application No. 10/712,886 in view of Vaid (US 6,502,131).

→ Claims 4 and 5 of application 10/712,886 (from hereon referred to as 712) teach
→ a graphical user interface (GUI) describing a set of services managing a portion of a computer grid, the GUI comprising: a matrix-like structure with columns and rows, each column representing a computer from a set of computers in the computer grid (Claim 4 of 712 states a graph with vectors and nodes for visualizing a computer grid); each column representing a computer from a set of computers in the computer grid [and] a column representing a first computer from the set of computers running a first grid manager (Claim 4 of 712 states that the nodes representing computers running grid managers); each computer from the set of computers having a grid (Claim 4 of 712 states that the vectors representing relations between pairs of grid managers); each row representing a grid manager or other application service and positions of labels in the structure indicating which computer currently runs which grid manager or other application service (Claim 4 of 712 states to generate a display showing the management services running on the computer); and one or more columns representing one or more computers from the set of computers running one or more grid managers having an inferior relation with the first grid manager (Claim 4 of 712 states that each of the relations defining a first grid manager to be superior to a second

Art Unit: 2176

grid manager and a vector points from a node representing the first grid manager to a node representing the second grid manager); and also teaches a shrinkable structure that hides the labels representing grid managers or other application services (Claim 4 of 712 states an expandable structure showing computer grid applications), respectively.

Claim 4 of 712 fails to teach a graph with vectors and nodes, each column representing a computer from a set of computers in the computer grid, each row representing a grid manager or other application service, and a column representing a first computer from the set of computers.

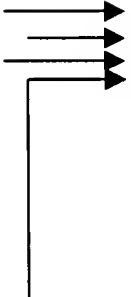

Vaid teaches columns and rows for the purpose representing them with computers and applications services in Fig 19.

It would have been obvious to one having ordinary skill in the art to modify 712 with columns and rows in place of edges, vertices, nodes, and vectors as taught by Vaid because they are both analogous when representing computers and application services.

It would have been obvious to one having ordinary skill in the art to modify 712 as a shrinkable structure because the opposite of a shrinkable structure is an expandable structure.

17. Claim 7 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 5 of copending Application No. 10/712,886 and further in view of Vaid (US 6,502,131).

Art Unit: 2176

Claim 5 of application 10/712,886 (from hereon referred to as 712) teaches a method comprising: receiving a request to view a sub grid network of a grid network (Claim 5 of 712 states receiving a request to visualize a grid network with at least one node from a set of linked nodes); the sub grid network representing a root node and nodes with inferior relations to the root node and displaying a state of the root and inferior grid managers and for each grid manager, a computer system running the grid manager (Claim 5 of 712 states displaying nodes corresponding to the grid managers in the first list and drawing vectors from the grid manager to the grid managers in the first list of grid managers); the nodes representing grid managers managing one or more services running on computers in the grid network (Claim 5 of 712 states the nodes representing computers running grid managers and vectors representing relations between pairs of grid managers); querying a grid manager representing the root node for its status and addresses of nodes with inferior relations and querying inferior grid managers for current status (Claim 5 of 712 states sending a first query to the grid manager requesting a first list of grid managers having an inferior relation to the root node).

Claim 5 of 712 fails to teach nodes representing grid managers.

Vaid teaches nodes representing grid managers for the purpose representing them with computers and application services in Fig 19.

It would have been obvious to one having ordinary skill in the art to modify 712 with columns and rows in place of nodes as grid as taught by Vaid because they are both represented with computers and application services.

Art Unit: 2176

Conclusion

18. The prior art made of record is considered pertinent to applicant's disclosure.

Bozak et al (2005/0027813).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Soumya (Ronnie) Dasgupta whose telephone number 571-272-7432. The examiner can normally be reached on M-F 7:30a – 5:00p EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Del Sole can be reached on 571-272-1130. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>.
